

## **MEL LAUNCHES NEW LIGHTWEIGHT RAPID DEPLOYMENT CCTV SOLUTION**

MEL Secure Systems, the leading developer of CCTV surveillance solutions, has launched a new lightweight version of its successful Domehawk CCTV camera system. MEL's new Mini Domehawk rapid deployment camera weighs in at just 2Kg and has been designed for applications where smaller mounting posts are used or where weight restrictions apply.

The Mini Domehawk is equipped with a powerful 10:1 optical zoom lens for applications where rapid deployment of public space cameras is required. It offers preset and tour functions as well as offering excellent low light characteristics enabling it to perform effectively in all light conditions whilst an optional on-board DVR provides up to 400 hours of recording capacity.

MEL Secure Systems has incorporated the latest COFDM transmission technology into the new Mini Domehawk system enabling high quality, interference free images to be received up to 4km away from each deployment. The cameras can use 240v AC or a 12v DC supply, making them ideal for both fixed and temporary installations.

According to Peter Druzyc, Managing Director of MEL Secure Systems: "The new Mini Domehawk CCTV provides a powerful and compact solution that delivers the same level of performance as the larger Domehawk system whilst weighing in at less than 35% of the weight. It consolidates MEL's reputation as the UK's leading developer of innovative and cost effective CCTV solutions."
